

CLAIMS

1. An image display device comprising a main display body provided with a display portion for presenting an image, a first loudspeaker for reproducing sounds of low frequency, a second pair of loudspeakers for reproducing sounds of middle and high frequencies, a duct for improving a low frequency sound property of the first loudspeaker and a stand for supporting the main display body, wherein the stand has a portion being opposite to an outlet of the duct.

2. An image display device as defined in claim 1, wherein a housing having the first loudspeaker and the second pair of loudspeakers therein has a plurality of through holes in a first area corresponding to an aperture size of each loudspeaker and a plurality of blind holes in a second area surrounding the first area, wherein the second area for the first loudspeaker is different in peripheral shape and/or size from the second area for each of the second pair of loudspeakers.

3. An image display device as defined in claim 1 or 2, wherein an aperture size of the first loudspeaker is larger than that of the second loudspeakers.

4. An image display device as defined in claim 2 or 3, wherein a ratio of a total area of the through holes to the first area for the first loudspeaker is larger

than the first area for each of the second pair of loudspeakers.

5. An image display device comprising a main display body provided with a display portion for presenting an image, a first loudspeaker for reproducing sounds of low frequency and a second pair of loudspeakers for reproducing sounds of middle and high frequencies, wherein a duct for improving a low frequency sound property and a stand for supporting the main display body, wherein a housing having the first loudspeaker and the second pair of loudspeakers has a plurality of through holes formed in a first area corresponding to an aperture of each of the loudspeakers and a plurality of blind holes formed in a second area surrounding the first area, wherein the second area for the first loudspeaker is different in peripheral shape and/or size from the second area for each of the second pair of loudspeaker.

6. An image display device as defined in claim 5, wherein the first and second loudspeakers are provided in the main display body, wherein the first loudspeaker is mounted in a lower portion or an upper portion of the main display body and the second loudspeakers are arranged one on left and right sides of the first loudspeaker.

7. An image display device as defined in claim 5, wherein the image display device has a stand supporting

the main display body and the first loudspeaker and the second pair of loudspeakers are mounted on the stand, wherein the first loudspeaker is placed at a center and the second loudspeakers are arranged one on left and right sides of the first loudspeaker.

8. An image display device as defined in any one of claims 5 to 7, wherein an aperture of the first loudspeaker is larger than that of each of the second pair of loudspeakers.

9. An image display device as defined in any one of claims 5 to 8, wherein a ratio of a total opening area of the through holes to the first area for the first loudspeaker is larger than that of the first area for the second loudspeakers.
